(54) STATIC ELECTRICITY AND ELECTROMAGNETIC WAVE SHIELDING MATERIAL

(57)Abstract:

PURPOSE: To improve a shielding material, which is excellent in a visible ray transmissive and a shielding property, in workability and a mar resistance by a method wherein a transparent metal thin layer and a transparent dielectric thin film layer are provided to one side of a transparent film base material, and a transparent board is stuck onto the other side of the transparent film base material through the intermediary of a transparent adhesive agent layer.

CONSTITUTION: A transparent metal thin film layer 2 is provided to one side of a transparent film base material 1, and moreover a transparent dielectric thin film layer 3 is provided thereon to constitute a transparent conductive film protected by a dielectric. A transparent adhesive agent layer 4 is provided to the other side of the film base material 1 where the film layers 2 and 3 are not provided, and another transparent board 5 is stuck on through the intermediary of the adhesive layer 4. By these processes, a member possessed of properties such as a visible ray transmissive property, durability, and a static electricity and electromagnetic wave shielding property can be obtained and concurrently it is excellent in workability and a mar resistance at the manufacture of it.
